

Considering the need of having sample/input files for the fuzzing tool. The Grabber class derives from all Interfaces, like the stack layers does and overrides the virtual functions in order to "grab" the arguments of the functions and store them in a binary file. This pattern enables to test every layer-mainclass by itself.

The Parent_of_Grabber_and_Loader class serves load() and save() functions and also struct type's as containers to make the save & load process easier.
